

## **Ginguro Commences Drilling at Pardo**

**SUDBURY, ONTARIO – June 28, 2010** –Ginguro Exploration Inc. (TSX-V: GEG) is pleased to announce that it has commenced diamond drilling at its Pardo Property. This program of drilling follows a geological mapping program that was recently conducted on the property.

Geological mapping and analysis conducted by the Company's South African lead-exploration team has been able to refine Ginguro's exploration methodology to more confidently target gold-bearing reefs within the host conglomerates. The mapping has revealed that a series of north-south fault structures have displaced the basal Mississauga Formation in a horst and graben block faulted pattern. In the horst blocks, the basal reefs of the conglomerate have risen up and are at or very near surface. In the graben blocks, they have down faulted and the target rocks are deeper, by some tens of metres.

The gold-bearing conglomerates (target rocks) at Pardo are flat lying and occur near surface. Therefore, the Company is able to drill a large number of shallow holes. The currently planned drilling is designed to test the gold-bearing conglomerates in the southern portion of the Endurance-optioned portion of the property.

Drilling will initially be conducted by one drill rig, with a second rig to be added later in the summer. The Company intends to infill between diamond drill control holes with large diameter reverse circulation holes, which will significantly lower the cost of drilling while also providing a large sample for gold analysis.

The planned drill hole locations are illustrated on a map that can be found in Figure 1 of this press release.

- DIABASE DYKES
- UPPER MISSISSAUGI SANDSTONES
- GRITSTONE
- UNIT 3 - UPPER CONGLOMERATE
- UNIT 2 - SANDSTONE
- UNIT 1 - LOWER CONGLOMERATE
- BASEMENT

The Company also reports that, as a result of field work and research of historic records, it has concluded that the gold-bearing conglomerates extend for a least 10 km from where they occur at surface on the Pardo property. Consequently, several additional claims have recently been staked.

Ginguro's Pardo property is a paleo-placer gold property centred around Pardo Township, located approximately 65 km north-east of Sudbury, Ontario. The Company owns a 100% interest in 84 sq. km of claims and has an option to earn up to 70% in a further 33 sq. km of claims, pursuant to an agreement with Endurance Gold Corporation.

### **About Ginguro**

Ginguro Exploration Inc. is a mineral exploration company focused on the advancement of its paleo-placer gold property, located in Pardo Township in northern Ontario and of its El Alto IOCG property located north-west of Santiago, Chile.
