

Ginguro Receives Assays for 42.5 Metres at Eastern Reef

SUDBURY, ONTARIO – September 6, 2013 – Ginguro Exploration Inc. (TSX-V: GEG) (the “Company” or “GEG”) is pleased to announce the first results from contiguous channel sampling of the Eastern Reef Zone at the Company’s Pardo property, located approximately 65 km northeast of Sudbury, Ontario.

Assays for 42.5 meters of a 92.5 meter channel have been received. Over this 42.5 metres, assays for 85 samples, each 50 centimeters in length, returned an average of 4.4 g/t. Contained within this 42.5 metres, a continuous section of 23.5 metres returned an average of 6.6 g/t Au. Individual samples are listed in a table at the end of this release.

The Eastern Reef is located in the north-central part of the Pardo property. The other newly uncovered surface gold zone, the 007 Zone, is located 600 metres southwest of the Eastern Reef. Work to date suggests that the area between these zones is underlain by similar geology.

Maps of each of the Eastern Reef and the 007 Zone, as well as the broader discovery area, can be found on the company’s website at www.ginguro.com.

Additional channel samples from both the Eastern Reef and the 007 Zone have also been delivered for assay and will be announced once received.

**Table 1: Eastern Reef
Continuous Channel Sample Assays**

Channel #	Length (cm)	Au (g/t)
CH-13-107-01	50	1.5
CH-13-107-02	50	9.6

The channel lengths reported in this release represent gold values within the pyritic conglomerate outcrop at surface and do not represent true thicknesses of the gold bearing conglomerate. The gold-bearing conglomerate is estimated to have a true thickness of between 3 and 6 metres in this area.

Both the Eastern Reef and the 007 Zone are located within the Pardo JV Property. Ginguro holds a 55% interest and Endurance Gold Corporation holds the remaining interest in the Pardo JV. Ginguro is funding 100% of the most recently approved program.

About Ginguro

Ginguro Exploration Inc. is a mineral exploration company focused on the advancement of its Pardo paleo-placer gold property, located in Pardo Township in northern Ontario. To learn more about Ginguro Exploration Inc., please visit: www.ginguro.com.

Statements in this release that are forward-looking statements are subject to various risks and uncertainties concerning the specific factors disclosed under the heading "Risk Factors" in the Corporation's filings with Canadian securities regulators. Such information contained herein represents management's best judgment as of the date hereof based on information currently available. The Corporation does not assume any obligation to update any forward-looking statements, save and except as may be required by applicable securities laws.

Pardo samples are transported in security sealed bags for preparation at AGAT Prep Lab located in Sudbury, Ontario. Prepped samples are shipped for analysis to the AGAT Assay Laboratory in Mississauga, Ontario. AGAT Laboratories Ltd. is an ISO 17025 registered laboratory. Samples are analyzed by industry standard 50 gram fire assay fusion with atomic absorption spectroscopy (AAS) finish, and a gravimetric finish on samples exceeding 10 g/t gold. The Company inserts a certified reference standard or an analytical blank in every batch of 20 samples. Validation parameters are established in the database to ensure quality control.
